Right Combination, Right Solution

- Solution for cardiovascular risk reduction¹
- Achieve blood pressure goal in shorter time, with less titration steps²
- Once daily: Easy-to-follow regimen³
- Favorable safety profile, attenuated side effects of components^{4,5}
- Better patient adherence and compliance⁶

Massoud Ghasemi.MD
President of Congress

WELCOME TO ICCU 2025

Dear Colleagues and Guests,

It is our pleasure to extend you our very warm welcome on behalf of the Iranian Society of Atherosclerosis. We are grateful that you have accepted our invitation to attend the “25th International Congress on Cardiovascular Updates ” in Tehran.

Year after year, this congress offers us the opportunity to renew contacts and hold discussions with delegates from all over the world on the pertinent issues of healthcare.

The speeches and events outlined in the congress agenda are arranged to cover a wide range of core topics in the fields of cardiovascular diseases.

We wish all our guests, whether from Iran or visiting from abroad, a productive and successful congress. We also wish you a pleasant stay in Tehran. We thank all our sponsors, whose support made this significant gathering possible.

As we stand here surrounded by colleagues, humbled by what we’ve accomplished, yet inspired by hopes and dreams, hopes and dreams we wish to turn into reality. We hope to be able to offer better patient care and make advancements in the field.

Together we can draw strength from our bonds and learn from one another to expand our horizons.

We look forward to welcoming you in the 25th International Congress on Cardiovascular Updates (ICCU 2025).

Sincerely,

Massoud Ghasemi, MD.

Repatha[®]

(evolocumab) injection
140 mg/mL

- Repatha[®] is a treatment that dramatically lowers LDL-C and can also reduce the risk of another heart attack or stroke.¹
- By inhibiting PCSK9, Repatha[®] increases the number of LDL-C receptors on the surface of the liver, resulting in reduction of LDL-C from circulation.¹
- Repatha[®] plus Statin lowered LDL-C by average of 63% in only 12 weeks.¹
- Repatha[®] added to a statin was proven to reduce the risk of composite CV events by 20% in a median of only 2.2 years, and the benefit improved over the time^{1,2}
- As an adjunct to other LDL-C-lowering therapies in patients aged 10 years and older with homozygous familial hypercholesterolemia (HoFH), to reduce LDL-C.³
